A;Title: The complete amino acid sequence of bovine skeletal muscle acylphosphatase. A;Recession: A29578

A;Recession: A29578

A;Rolecule type: protein

A;Residues: 1-98 <CAM>
C;Superfamily: acylphosphatase
C;Keywords: acetylated amino end; hydrolase
F;1/Modified site: acetylated amino end (Ser) #status experimental
F;21/Disulfide bonds: interchain #status predicted
F;21/Binding site: glutathione (Cys) (covalent) #status predicted

     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score

Plant physiol. 115:113-121(1997).
-i- FUNCTION: INVOLVED IN THE REGULATION OF CARBON PARTITIONING IN
THE LEAVES OF PLANTS. MAY REGULATE THE SYNTHESIS OF SUCROSE AND
THEREFORE PLAY A MAJOR ROLLE AS A LIMITING FACTOR IN THE EXPORT OF
PHOTOASSIMILATES OUT OF THE LEAF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots; Asteridae; lamiids; Lamiales; Lamiales incertae sedis; Torenieae;

Subunits are arranged in a open helical conformation. Pili with a defective papE gene have low adhesive capacity or none; however, the binding property of the whole cell is not affected. Pili are polar filaments radiating from the surface of the bacterium to a length of 0.5-1.5 micrometers and numbering 100-300 per cell, and enable bacteria to colonize the epithelium of specific host organs.

-!- SUBCELLULAR LOCATION: Secreted; tip of the pilus.
-!- MISCELLANEOUS; Strains of E. coli that cause infection of the human urinary tract produce pap-pil which are hair-like appendages consisting of about 1000 helically arranged subunits of the protein papA. These pili mediate binding to digalactoside-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Scoring table:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    on:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being part and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. These can be used in the detection, monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (EST) library.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      in non-prostate tissue. PS118 polypeptides, polynucleotides, antibodies, agonists and inhibitors are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and treating (including by genetic immunisation), or determining the predisposition of an individual to, diseases and conditions of the prostate, such as benign prostatic hyperplasia, prostatitis, prostate; intraspithelial neoplasia, prostate cancer, tumours and metastases. The PS118 polypeptides can be produced by expression of FS118 polynucleotides in transfected host cells, and immunogenic peptides are useful for raising PS118-specific antibodies of diagnostic use. The methods and reagents of the invention may provide an early means of detecting diseases of the prostate and may also provide new markers which can differentiate between the clinically important and unimportant prostate cancers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is encoded by consensus PS118 sequence derived from overlapping EST (expressed sequence tag) clones AAV82803-10. The clones were identified from a cDNA library made from prostate tumour tissue. Recombinant PS118 protein is used to detect PS118-specific antibodies, to raise antibodies for detection of PS118 antigens, to screen for specific binding agents (potential therapeutics, and to isolate specific antibodies from serum. Detection of PS118 protein or nucleic acid, which are prostate related, and altered or elevated in prostatic disease, is used for detection, diagnosis, staging, monitoring and prognosis of used for detection, particularly cancer, and to identify subjects at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a number of prostate-specific sequences derived from the human PS118 gene. These can be used in the detection, monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (EST) library.
                     Detecting presence of target PS118 polynucleotide in test sample, useful for detecting, diagnosing, staging, monitoring, prognostic preventing or treating or determining predisposition to prostate disease -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of a human prostate-specific PS118 CC polypeptide, as predicted from a partial consensus cDNA sequence (see ABA91651), and lacking the N-terminal region. The PS118 CC consensus sequence is found at least 12 times more often in prostate than in non-prostate tissue. PS318 polypeptides, including derivatives of the present sequence, polynucleotides, commended the prostate tissue. PS318 polypeptides, commended to the present sequence, polynucleotides, agonists and inhibitors are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and contenting (including by genetic immunisation), or determining the prediction of an individual to, diseases and conditions of the prostate, such as benign prostatic hyperplasia, prostatitis, prostate; such as benign prostatic hyperplasia, prostatitis, prostate cancer, tumours and metastases. The PS118 polypeptides can be produced by expression composition of the invention may provide an early means of detecting diseases of the prostate and may also provide new markers which can differentiate between the clinically important and unimportant prostate cancers without the use of surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC and gene mapping, and in recombinant production of (II). The coplynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful in gene therapy techniques CC (III). (II) is useful for generating antibodies against it, detecting or crowntitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical ci maging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this partent did not appear in the printed confict of the invention, but was obtained in electronic format directly from WIPO at figure in the printed confict of the invention of the printed confict of the printed 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

Claim

20; SEQ ID 495; 394pp; English

hybridisation probes, primers for PCR, for chromosome and gene mapping, for the recombinant production of protein, or in generation of anti-sense DNA or RNA. The polynucleotides are useful in diagnostics as expressed

(ABQ99268-ABQ99608) and proteins (ABP64682-ABP65022). The sequenuseful in therapeutic, diagnostic and research methods. The polynucleotides may be used in the field of molecular biology as The present invention relates to novel human coding sequences (ABQ99268-ABQ99608) and proteins (ABP64682-ABP65022). The seq

sequences are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9999999999999999999999999999999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC sequence tags (ESTS) for identifying expressed genes or for physical CC mapping of the human genome. The proteins may be used as molecular weight CC markers, or as nutritional sources or supplements. The proteins may be used to maintain and expand cell population in a totipotential or CC pluripotential state useful for re-engineering damaged or diseased CC tissues, transplantation, manufacture of bio-pharmaceuticals or the CC development of bio-sensors. The polynucleotides and proteins are useful for preventing, treating or ameliorating disorders involving aberrant CC protein expression or biological activity, e.g. haematopoietic disorders, CC central/peripheral nervous system diseases, mechanical and traumatic disorders, non-healing wounds, immune deficiencies and disorders, CC disorders, or cancer. The polynucleotide sequences of the invention were assembled from ESTs isolated mainly by sequencing by hybridiation, and CC assembled from ESTs isolated mainly by sequencing by hybridiation, and CC note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO Cat firm wino informly-published not segmences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cc polynucleotifies are also used in diagnostics as expressed sequence tags (for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical cimaging of sites expressing (II). (I) and (II) are useful for treating climaging of sites expressing (II). (I) and (II) are useful for treating climaging of sites expressing (II). (I) are useful for treating climaging of some context of the polypeptide and polynucleotide sequences have applications in climaging of some context of the context of the context of the polypeptide and polynucleotide sequences have applications in climaging of context of the printed electron, but was obtained in electronic format directly from WIPO context of the context
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
